# Comparing Temperature Changes Across Countries

Hasan GENÇ

2026-10-20

## Project Summary

Global warming affects the entire world, but temperatures are rising at different rates across countries. Comparing these changes is important for understanding how global warming varies between regions. This project focuses on analyzing historical temperature anomalies using data from Our World in Data. Various data visualization techniques will be used to compare temperature trends and highlight differences between countries. The main goal is to raise awareness about global warming and the importance of climate action.

## Dataset Information

**Dataset Name:** Annual Temperature Anomalies

**Data Source:** Our World in Data

**Original Data Provider:** Copernicus Climate Change Service (ERA5)
